ELI 280
RESTING ELECTROCARDIOGRAPH
USER MANUAL

Manufactured by Mortara Instrument, Inc., Milwaukee, Wisconsin U.S.A.

⚠️ CAUTION: Federal law restricts this device to sale by or on the order of a physician.
## TECHNICAL SUPPORT AND SERVICE

### Headquarters

**Mortara Instrument, Inc.**  
7865 North 86th Street  
Milwaukee, WI 53224  
U.S.A.  
Tel: 414.354.1600  
Tel: 800.231.7437  
Fax: 414.354.4760  
Internet: [http://www.burdick.com](http://www.burdick.com)

### European Union Representative

**Mortara Rangoni Europe, Srl**  
Via Cimarosa 103/105  
40033 Casalecchio di Reno (BO)  
Italy

NOTICES

Manufacturer's Responsibility

Mortara Instrument, Inc. is responsible for the effects on safety and performance only if:

• Assembly operations, extensions, readjustments, modifications, or repairs are carried out only by persons authorized by Mortara Instrument, Inc.

• The device is used in accordance with the instructions for use.

Responsibility of the Customer

The user of this device is responsible for ensuring the implementation of a satisfactory maintenance schedule. Failure to do so may cause undue failure and possible health hazards.

Equipment Identification

Burdick branded equipment is identified by a serial and reference number on the back of the device. Care should be taken so that these numbers are not defaced.

Copyright and Trademark Notices

This document contains information that is protected by copyright. All rights are reserved. No part of this document may be photocopied, reproduced, or translated to another language without prior written consent of Mortara Instrument, Inc.

Other Important Information

The information in this document is subject to change without notice.

Mortara Instrument, Inc. makes no warranty of any kind with regard to this material including, but not limited to, implied warranties of merchantability and fitness for a particular purpose. Mortara Instrument, Inc. assumes no responsibility for any errors or omissions that may appear in this document. Mortara Instrument, Inc. makes no commitment to update or to keep current the information contained in this document.
Your Mortara Warranty

MORTARA INSTRUMENT, INC. (hereafter referred to as “Mortara”) warrants that components within Burdick branded products (hereafter referred to as “Product/s”) will be free from defects in workmanship and materials for the number of years specified on documentation accompanying the product, or previously agreed to by the purchaser and Mortara, or if not otherwise noted, for a period of twenty-four (24) months from the date of shipment.

Consumable, disposable or single use products such as, but not limited to, PAPER or ELECTRODES are warranted to be free from defects in workmanship and materials for a period of 90 days from the date of shipment or the date of first use, whichever is sooner.

Reusuable product such as, but not limited to, BATTERIES, BLOOD PRESSURE CUFFS, BLOOD PRESSURE HOSES, TRANSDUCER CABLES, Y-CABLES, PATIENT CABLES, LEAD WIRES, MAGNETIC STORAGE MEDIUMS, CARRY CASES or MOUNTS, are warranted to be free from defects in workmanship and materials for a period of 90 days. This warranty does not apply to damage to the Product/s caused by any or all of the following circumstances or conditions:

a) Freight damage;

b) Parts and/or accessories of the Product/s not obtained from or approved by Mortara;

c) Misapplication, misuse, abuse, and/or failure to follow the Product/s instruction sheets and/or information guides;

d) Accident; a disaster affecting the Product/s;

e) Alterations and/or modifications to the Product/s not authorized by Mortara;

f) Other events outside of Mortara’s reasonable control or not arising under normal operating conditions.

THE REMEDY UNDER THIS WARRANTY IS LIMITED TO THE REPAIR OR REPLACEMENT WITHOUT CHARGE FOR LABOR OR MATERIALS, OR ANY PRODUCT/S FOUND UPON EXAMINATION BY MORTARA TO HAVE BEEN DEFECTIVE. This remedy shall be conditioned upon receipt of notice by Mortara of any alleged defects promptly after discovery thereof within the warranty period. Mortara’s obligations under the foregoing warranty will further be conditioned upon the assumption by the purchaser of the Product/s (i) of all carrier charges with respect to any Product/s returned to Mortara’s principal place or any other place as specifically designated by Mortara or an authorized distributor or representative of Mortara, and (ii) all risk of loss in transit. It is expressly agreed that the liability of Mortara is limited and that Mortara does not function as an insurer. A purchaser of a Product/s, by its acceptance and purchase thereof, acknowledges and agrees that Mortara is not liable for loss, harm, or damage due directly or indirectly to an occurrence or consequence therefrom relating to the Product/s. If Mortara should be found liable to anyone under any theory (except the expressed warranty set forth herein) for loss, harm, or damage, the liability of Mortara shall be limited to the lesser of the actual loss, harm, or damage, or the original purchase price of the Product/s when sold.
EXCEPT AS SET FORTH HEREIN WITH RESPECT TO REIMBURSEMENT OF LABOR CHARGES, A PURCHASER’S SOLE EXCLUSIVE REMEDY AGAINST MORTARA FOR CLAIMS RELATING TO THE PRODUCT/S FOR ANY AND ALL LOSSES AND DAMAGES RESULTING FROM ANY CAUSE SHALL BE THE REPAIR OR REPLACEMENT OF DEFECTIVE PRODUCT/S TO THE EXTENT THAT THE DEFECT IS NOTICED AND MORTARA IS NOTIFIED WITHIN THE WARRANTY PERIOD. IN NO EVENT, INCLUDING THE CLAIM FOR NEGLIGENCE, SHALL MORTARA BE LIABLE FOR INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES, OR FOR ANY OTHER LOSS, DAMAGE, OR EXPENSE OF ANY KIND, INCLUDING LOSS OF PROFITS, WHETHER UNDER TORT, NEGLIGENCE OR STRICT LIABILITY THEORIES OF LAW, OR OTHERWISE. THIS WARRANTY IS EXPRESSLY IN LIEU OF ANY OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO THE IMPLIED WARRANTY OF MERCHANTABILITY AND THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.
**Warning:** Means there is the possibility of personal injury to you or others.

**Caution:** Means there is the possibility of damage to the device.

**Note:** Provides information to further assist in the use of the device.

---

**Warning(s)**

- This manual gives important information about the use and safety of this device. Deviating from operating procedures, misuse or misapplication of the device, or ignoring specifications and recommendations could result in increased risk of harm to users, patients and bystanders, or damage to the device.

- Device captures and presents data reflecting a patient's physiological condition that when reviewed by a trained physician or clinician can be useful in determining a diagnosis; however, the data should not be used as a sole means for determining a patient’s diagnosis.

- Users are expected to be licensed clinical professionals knowledgeable about medical procedures and patient care, and adequately trained in the use of this device. Before attempting to use this device for clinical applications, the operator must read and understand the contents of the user manual and other accompanying documents. Inadequate knowledge or training could result in increased risk of harm to users, patients and bystanders, or damage to the device. Contact technical service for additional training options.

- To ensure that electrical safety is maintained during operation from AC (−) power, the device must be plugged into a hospital-grade outlet.

- To maintain designed operator and patient safety, peripheral equipment and accessories used that can come in direct patient contact must be in compliance with UL 60601-1, IEC 60601-1, and IEC 60601-2-25. Only use parts and accessories supplied with the device and available through Burdick/Mortara/Quinton.

- Patient cables intended for use with the device include series resistance (9 Kohm minimum) in each lead for defibrillation protection. Patient cables should be checked for cracks or breakage prior to use.

- Conductive parts of the patient cable, electrodes, and associated connections of type CF applied parts, including the neutral conductor of the patient cable and electrodes, should not come into contact with other conductive parts including earth ground.

- ECG electrodes could cause skin irritation; patients should be examined for signs of irritation or inflammation.

- To avoid the possibility of serious injury or death during patient defibrillation, do not come into contact with device or patient cables. Additionally, proper placement of defibrillator paddles in relation to the electrodes is required to minimize harm to the patient.

- This device does not automatically switch between direct or wireless Patient acquisition devices. Clinician must choose Patient acquisition device before ECG acquisition. If your device is equipped with a receiver for a wireless Patient acquisition device, always make sure that you are receiving data from the expected module.
This device was designed to use the electrodes specified in this manual. Proper clinical procedure must be employed to prep the electrode sites and to monitor the patient for excessive skin irritation, inflammation, or other adverse reactions. Electrodes are intended for short-term use and should be removed from the patient promptly following testing.

To avoid potential for spread of disease or infection, single-use disposable components (e.g., electrodes) must not be reused. To maintain safety and effectiveness, electrodes must not be used beyond their expiration date.

To ensure the safety of both the patient and the device, 1.5 meters (5 feet) of open area should surround the patient.

A possible explosion hazard exists. Do not use the device in the presence of a flammable anesthetic mixture.

Where the integrity of external protective earth conductor arrangement is in doubt, the device shall be operated from its internal electrical power source.

All signal input and output (I/O) connectors are intended for connection of only those devices complying with IEC 60601-1, or other IEC standards (e.g., IEC 60950) as appropriate to the device. Connecting additional devices to the device may increase chassis and/or patient leakage currents. To maintain operator and patient safety, consideration should be given to the requirements of IEC 60601-1-1, and leakage currents should be measured to confirm no electric shock hazard exists.

To improve immunity to potential interfering electromagnetic signals, shielded cabling is recommended when connecting the device to a network.

To maintain operator and patient safety, equipment connected to the same network as the device must meet the requirements of IEC 60950 or IEC 60601-1.

To prevent electric shock due to unequal ground potentials that may exist between points of a distributed network system or fault conditions in external network connected equipment, network cable shielding (where used) must be connected to protective earth ground appropriate to the area where the device is used.

The device has not been designed for use with high-frequency (HF) surgical equipment and does not provide a protective means against hazards to the patient.

The quality of the signal produced by the device may be adversely affected by the use of other medical equipment, including but not limited to defibrillators and ultrasound machines.

For proper operation and the safety of users or patients and bystanders, equipment and accessories must be connected only as described in this manual. Do not connect a telephone line cable to the LAN connector.

Some Burdick electrocardiographs can be equipped with a GPRS (cellular modem) or wireless LAN (WLAN) module for transmitting ECG records. Device labeling and the presence of an antenna port will indicate if your device is equipped with such a module. If so equipped, the following notices apply:

- The WLAN identification can be found on a label on the bottom of the device.
- Quatech, Inc. Model WLNG-AN-MR551: 2400 MHz (model subject to change without notice)
• Use of the WLAN module may interfere with other equipment operating in the vicinity. Check with local authorities or spectrum management officials in your facility to determine if restrictions apply to the use of this feature in your area.

• Do not transmit via the WLAN module with a missing or damaged antenna. Replace a damaged antenna immediately.

• Use only the antenna supplied for use with this device. Unauthorized antennas, modifications, or attachments could damage the WLAN module and may contravene local RF emission regulations or invalidate type approval.

• To ensure compliance with current regulations limiting both maximum RF output power and human exposure to radio frequency radiation, a separation distance of at least 20 cm must be maintained between the device's antenna and the head and body of the user and any nearby persons at all times. To help prevent degradation of RF signal and to avoid excess RF energy absorption, do not touch the antenna during data transmission.

• The WLAN module complies with applicable RF safety standards including standards and recommendations for the protection of public exposure to RF electromagnetic energy that have been established by governmental bodies and other qualified organizations, such as the following:
  • Federal Communications Commission (FCC)
  • Directives of the European Community
  • Directorate General V in Matters of Radio Frequency Electromagnetic Energy

Caution(s)

• To prevent possible damage to the touchscreen, do not use sharp objects to touch the screen icons, only use fingertips.

• Do not attempt to clean the device or patient acquisition device by submersing into a liquid, autoclaving, or steam cleaning as this may damage equipment or reduce its usable life. Wipe the exterior surfaces with a warm water and mild detergent solution and then dry with a clean cloth. Use of unspecified cleaning/disinfecting agents, failure to follow recommended procedures, or contact with unspecified materials could result in increased risk of harm to users, patients and bystanders, or damage to the device.

• No user-serviceable parts inside. Screw removal by qualified service personnel only. Damaged or suspected inoperative equipment must be immediately removed from use and must be checked/repair by qualified service personnel prior to continued use.

• The rechargeable internal battery is a sealed lead-acid type and it is totally maintenance free. If the battery appears to become defective, refer to Technical Service Department.

• Do not pull or stretch patient acquisition device as this could result in mechanical and/or electrical failures. Patient cables should be stored after forming them into a loose loop.

• Calibration of the display is required before initial operation of the unit. No special equipment is needed for the proper operation or maintenance of the device.

• When necessary, dispose of the device, its components and accessories (e.g., batteries, cables, electrodes), and/or packing materials in accordance with local regulations.
• Proper functioning backup items such as a spare patient cable, front-end device, display monitor, and other equipment are recommended on hand to prevent delayed treatment due to an inoperable device.

**Note(s)**

• Patient movement may generate excessive noise that may affect the quality of the ECG traces and the proper analysis performed by the device.

• Proper patient preparation is important to proper application of ECG electrodes and operation of the device.

• The algorithm detecting electrode misplacements is based on normal physiology and ECG lead order, and tries to identify the most likely switch; however, it is advisable to check the other electrode positions in the same group (limb or chest).

• There is no known safety hazard if other equipment, such as pacemakers or other stimulators, is used simultaneously with the device; however, disturbance to the signal may occur.

• The display of a thick baseline while using the WAM wireless acquisition module (square waves on rhythm printout) could be due to the WAM being turned off or having no battery, or the WAM being out of range or experiencing a calibration error. Review the LED indicator on the WAM to ensure the unit is turned on and has proper battery level. Ensure the WAM is paired correctly and is within recommended proximity of the electrocardiograph, and/or power cycle the WAM to re-calibrate. Review the WAM user manual for details.

• The display of a thick baseline while using the AM12 acquisition module (square waves on rhythm printout) could be due to an improper auto-calibration. Reconnect the AM12 or power cycle the electrocardiograph.

• A square wave on the display and rhythm printout could be due to the WAM, the AM12, or lead wires not being connected to the patient.

• As defined by IEC 60601-1 and IEC 60601-2-25, the device is classified as follows:
  • Class I equipment or internally powered.
  • Type CF defibrillation-proof applied parts.
  • Ordinary equipment.
  • Equipment not suitable for use in the presence of a flammable anesthetic mixture.
  • Continuous operation.

**NOTE:** *From a safety perspective, per IEC 60601-1 and derivative standards/norms, this device is declared to be “Class I” and uses a three-prong inlet to ensure an earth connection is made along with mains. The ground terminal on the mains inlet is the only protective earth point in the device. Exposed metal accessible during normal operation is double insulated from mains. Internal connections to earth ground are functional earth.*
• This device is intended to be used in a hospital or doctor’s office setting, and should be used and stored according to the environmental conditions specified below:

  Operating temperature:  +10° to +40°C (+50° to +104°F)
  Operating humidity:    10% to 95% RH, non-condensing
  Storage temperature:  -40° to +70°C (-40° to +158°F)
  Storage humidity:     10% to 95% RH, non-condensing
  Atmospheric pressure: 500 hPa to 1060 hPa

• The device will automatically turn off (blank screen) if the batteries have been severely discharged and the AC mains is disconnected from the device.

• After operating the device using battery power, always reconnect the power cord. This ensures that the batteries will be automatically recharged for the next time you use the device. A light next to the on/off switch will illuminate indicating that the device is charging.

• WAM must be paired to electrocardiograph before operation.

• The device must be configured at the factory for use with the WAM.

• The device is UL classified:

  WITH RESPECT TO ELECTRIC SHOCK,
  FIRE AND MECHANICAL HAZARDS ONLY IN ACCORDANCE WITH
  UL2601-1, IEC60601-1, CAN/CSA CC22.2 No. 601.1,
  AND IEC60601-2-25

Wireless Data Transmission

• Some Burdick electrocardiographs can be equipped with an optional wireless data transmission module (WLAN or GSM). Both these technologies use radios to transmit data to a Burdick receiving application. Due to the nature of radio transmissions, it’s possible that, due to the characteristics of the environment where the device is located, some other RF sources may interfere with the transmission generated by the device. Mortara Instrument has tested the coexistence of the device with other devices that can interfere such as devices using WLAN, Bluetooth radio, and/or cell phones. Although the current technology allows a very successful rate of transmission, it’s possible that in some rare occurrences, the system may not perform at its best resulting in a “failed transmission.” When this occurs, patient data will not be erased from the device nor stored in the receiving application, ensuring that partial or corrupted data are not made available to the receiving station. If the failure mode persists the user should move to a position where the RF signals may propagate better and allow successful transmissions.
WLAN Option

- Wireless options transmit at 2.4 GHz. Other nearby wireless devices may cause interference. If possible, move or turn off other devices to minimize potential interference.

- The following table shows the channels allocated in different geographic areas in the world. Please consult with your IT personnel in order to set the device on the proper channels.

<table>
<thead>
<tr>
<th>Specification</th>
<th>Description</th>

- In order to achieve the best transmission rate, it is necessary that the facility where the device is operated can provide good area coverage. Please consult the IT personnel of the facility to verify the proper WLAN availability in the area where the device will be used.

- RF wave propagation may be blocked or reduced by the environment where the device is used. Most common areas where this may occur are: shielded rooms, elevators, underground rooms. In all such situations it is recommended to move the device to a proper location and verify with the IT personnel of the facility the areas where the WLAN signals are available.
Symbol Delineation

- Attention, consult accompanying documents
- Alternating current
- Protective earth symbol (appears on inside of unit)
- Fuse symbol (appears on inside of unit)
- Telephone line (modem)
- Network (LAN)
- Universal Serial Bus (USB)
- Defibrillator-proof type CF applied part
- Input
- ON/OFF (power)
- Shift key (to enter upper case text on keyboard)
- Do not dispose as unsorted municipal waste. Per European Union Directive 2002/96, requires separate handling for waste disposal according to national requirements
- Antenna
- Indicates compliance to applicable European Union directives
Initiate acquisition of ECG

Initiate printing of continuous rhythm strip

GENERAL CARE

Precautions

- Turn off the device before inspecting or cleaning.
- Do not immerse the device in water.
- Do not use organic solvents, ammonia-based solutions, or abrasive cleaning agents which may damage equipment surfaces.

Inspection

Inspect your equipment daily prior to operation. If you notice anything that requires repair, contact an authorized service person to make the repairs.

- Verify that all cords and connectors are securely seated.
- Check the case and chassis for any visible damage.
- Inspect cords and connectors for any visible damage.
- Inspect keys and controls for proper function and appearance.

Cleaning Exterior Surfaces and Patient Acquisition Device

1. Remove cables and lead wires from device before cleaning.
2. For general cleaning of cables and lead wires, use a soft, lint-free cloth lightly moistened with a mild soap and water solution. Wipe and air dry.
3. For disinfecting the cables and lead wires, wipe exterior with a soft, lint-free cloth using a solution of Sodium Hypochlorite (10% household bleach and water solution) minimum 1:500 dilution (minimum 100 ppm free chlorine) and maximum 1:10 dilution as recommended by the APIC Guidelines for Selection and Use of Disinfectants.
4. Use caution with excess liquid as contact with metal parts may cause corrosion.
5. Do not immerse cable ends or lead wires; immersion can cause metal corrosion.
6. Do not use excessive drying techniques such as forced heat.

⚠️ WARNING: Prevent liquid from penetrating the device and do not attempt to clean/disinfect the device or patient cables by submerging into a liquid, autoclaving, or steam cleaning. Never expose cables to strong ultra-violet radiation. Do not sterilize the device or ECG lead wires with Ethylene Oxide (EtO) gas.

Cleaning the Device

Disconnect the power source. Clean the exterior surface of the device with a damp, soft, lint-free cloth using a solution of mild detergent diluted in water. After washing, thoroughly dry off the device with a clean, soft cloth or paper towel.

Cautions

Improper cleaning products and processes can damage the device, produce brittle lead wires and cables, corrode the metal, and void the warranty. Use care and proper procedure whenever cleaning or maintaining the device.
Electromagnetic compatibility with surrounding devices should be assessed when using the device.

An electronic device can either generate or receive electromagnetic interference. Testing for electromagnetic compatibility (EMC) has been performed on the device according to the international standard for EMC for medical devices (IEC 60601-1-2). This IEC standard has been adopted in Europe as the European Norm (EN 60601-1-2).

The device should not be used adjacent to, or stacked on top of other equipment. If the device must be used adjacent to or stacked on top of other equipment, verify that the device operates in an acceptable manner in the configuration in which it will be used.

Fixed, portable, and mobile radio frequency communications equipment can affect the performance of medical equipment. See Table X-4 for recommended separation distances between the radio equipment and the device.

The use of accessories, transducers, and cables other than those specified by Mortara Instrument may result in increased emissions or decreased immunity of the equipment.
Table X-1 Guidance and Manufacturer’s Declaration: Electromagnetic Emissions

The equipment is intended for use in the electromagnetic environment specified in the table below. The customer or the user of the equipment should ensure that it is used in such an environment.

---

a. Field strengths from fixed transmitters, such as base stations for radio (cellular/cordless) telephones and land mobile radios, amateur radios, AM and FM radio broadcast, and TV broadcast cannot be predicted theoretically with accuracy. To assess the electromagnetic environment due to fixed RF transmitters, an electromagnetic site survey should be considered. If the measured field strength in the location in which the equipment is used exceeds the applicable RF compliance level above, the equipment should be observed to verify normal operation. If abnormal performance is observed, additional measures may be necessary, such as reorienting or relocating the equipment.

b. Over the frequency range 150 kHz to 80 MHz, field strengths should be less than \( 3 \) V/m.
Table X-4 Recommended Separation Distances Between Portable and Mobile RF Communications Equipment and the Equipment

The equipment is intended for use in the electromagnetic environment in which radiated RF disturbances are controlled. The customer or the user of the equipment can help to prevent electromagnetic interference by maintaining a minimum distance between portable and mobile RF communications equipment (transmitters) and the equipment as recommended in the table below, according to the maximum output power of the communications equipment.

<table>
<thead>
<tr>
<th>Rated Maximum Output Power of Transmitter W</th>
<th>Separation Distance According to Frequency of Transmitter (m)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>150 KHz to 800 MHz</td>
</tr>
<tr>
<td></td>
<td>( d = 1.2\sqrt{P} )</td>
</tr>
<tr>
<td>0.01</td>
<td>0.1 m</td>
</tr>
<tr>
<td>0.1</td>
<td>0.4 m</td>
</tr>
<tr>
<td>1</td>
<td>1.2 m</td>
</tr>
<tr>
<td>10</td>
<td>4.0 m</td>
</tr>
<tr>
<td>100</td>
<td>12.0 m</td>
</tr>
</tbody>
</table>

For transmitters rated at a maximum output power not listed above, the recommended separation distance \( d \) in meters (m) can be estimated using the equation applicable to the frequency of the transmitter, where \( P \) is the maximum output power rating of the transmitter in watts (W) according to the transmitter manufacturer.

**NOTE 1:** At 800 MHz, the separation distance for the higher frequency range applies.

**NOTE 2:** These guidelines may not apply in all situations. Electromagnetic propagation is affected by the absorption and reflection from structures, objects, and people.

INTRODUCTION

Manual Purpose

This manual is intended to provide the user with information about:
- Using and understanding the ELI™ 280 electrocardiograph, the touchscreen display, and the function control icons.
- Preparing the ELI 280 for use. (Section 2)
- Acquiring, printing, and storing an ECG. (Section 3)
- Connectivity and transmitting ECGs. (Section 4)
- Maintaining the ECG directory. (Section 5)
- System settings. (Section 6)
- Maintenance and troubleshooting. (Appendix A)

NOTE: This manual may contain screen shots. Any screen shots are provided for reference only and are not intended to convey actual operating techniques. Consult the actual screen in the host language for specific wording.

Audience

This manual is written for clinical professionals with a working knowledge of medical procedures and terminology as required for monitoring cardiac patients.

Indications for Use

- Device is indicated for use to acquire, analyze, display, and print electrocardiograms.
- Device is indicated for use to provide interpretation of the data for consideration by a physician.
- Device is indicated for use in a clinical setting, by a physician or by trained personnel who are acting on the orders of a licensed physician. It is not intended as a sole means of diagnosis.
- The interpretations of ECG offered by the device are only significant when used in conjunction with a physician over-read as well as consideration of all other relevant patient data.
- Device is indicated for use on adult and pediatric populations.
- The device is not intended to be used as a vital signs physiological monitor.
System Description

The device is a 12-lead diagnostic electrocardiograph capable of acquiring, viewing, transmitting, printing, and storing 12-lead ECG data. The device is optionally equipped with the VERITAS™ resting ECG interpretation algorithm with age and gender specific criteria. If this option is enabled (see Section 6) the VERITAS algorithm can provide an over-reading physician with a silent second opinion through diagnostic statements output on the ECG report. For additional information on the VERITAS algorithm, please refer to the Physician’s Guide to VERITAS with Adult and Pediatric Resting ECG Interpretation (see Accessories).

The device can also be configured with expanded memory, bidirectional connectivity, and DICOM® protocol support, and operates on battery or line power.

Supported print formats for the ELI 280 include: standard or Cabrera 3+1, 3+3, 6, 6+6, or 12 channel in automatic mode; 3, 6, or 12 channel rhythm strip printing.

During rhythm strip printing the user can toggle between the various channels (default leads, limb and chest leads, etc.). To begin or resume a suspended rhythm strip print, press from the touchscreen display. To suspend or end a rhythm strip print, press from the touchscreen display.

The device includes:
- WAM™ or AM12™ acquisition module with lead wire set
- Hospital-grade power cord
- Antenna (with WLAN option)
- 1 pack paper (standard or A4)
- Physician’s Guide to VERITAS with Adult and Pediatric Resting ECG Interpretation
- User manual CD
- Accessory starter kit

Display Overview

The ELI 280 features a 10.1” diagonal LCD color display to preview the ECG waveform and other parameters as explained below. During ECG acquisition, notification messages will also appear on the display. (See Section 3, ECG Acquisition, Printing, Storage.)

Display Parameters

Patient Heart Rate (HR):
When a patient is connected to the device, the HR displays in real time in the upper left corner.

NOTE: If a lead fail occurs, an indicator flashes in the center of the display and the HR number displays dashes until the lead failure is corrected.

Patient Demographics:
The patient’s first and last name will be presented in the upper left corner of the display.

Display Speed/ECG Gain/ECG Filter:
The current settings for sweep speed, ECG gain, and ECG filter display along the top center.

WAM/AM12:
The acquisition module currently in use will be presented in the upper right corner of the display.

WARNING: If your device is equipped with a receiver for a Wireless Acquisition Module, always make sure that you are receiving data from the expected module.

Battery Indicator:
An icon indicating battery charge status displays in the upper right corner. (See Section 2, Applying Power.)

Clock:
The digital clock located in the lower right corner displays hour, minutes and seconds. The time appearing on the ECG printout is the time the ECG was acquired.
Function Control Icons

Use the touchscreen Function Control icons to complete patient and/or ECG functions, as well as access the Configuration menu.

**Patient Information, Orders, or Management Work List (MWL)**
Press this icon to manually enter patient demographics or use either a work list directory or common directory to find and download patient information.

**ECG Acquisition**
Press this icon to display the ECG in one of several formats: 12x1, 4x2, 6x2, and any three selected leads (i.e. II-V1-V5). The on-screen ECG report displays patient name, date and time, Last or Best 10 and the filter setting. Additional interpretive information is available by pressing the arrow soft keys to the right of the display. Additional utilities from this screen include printing or sending the ECG report, returning to the real-time display, advancing to the next patient, deleting the test results, and returning to the previous screen.

**Rhythm Printing**
Press this icon to start or resume a rhythm print.

**Transmit and/or Download Order List; Time Sync**
Press this icon to synchronize communication between the ELI 280 and a cardiology management system. Once synchronized, the Sync icon can be used to receive orders, transmit reports, synchronize time/date, or any combination thereof. The ELI 280 will synchronize only with certain versions of ELI Link and/or an E-Scribe™ data management system.

*NOTE: This device supports automatic time synchronization with a remote server. Inaccurate time/date settings can result in ECGs marked with inaccurate time stamps. Confirm the accuracy of the synchronized time prior to acquiring ECGs.*

**Configuration menu (Settings)**
Pressing this icon allows the administrator to configure the system’s display and ECG acquisition format along with other global settings. These configuration settings become the default setting at power up and for each ECG test unless customized for an individual patient.

*NOTE: If a format change has been made during a specific test the ELI 280 will return to its default setting for the next patient.*

**Stop**
Press this icon to stop or suspend a rhythm print, or stop a function.

**Home**
Press this icon to return to the real-time acquisition display.
## Specifications

Contact your dealer or go to [www.burdick.com](http://www.burdick.com) for more information.
Initial Startup

When powering ON the ELI 280 the system requires the user to set certain configurations prior to obtaining an ECG:

1. Date and time (including daylight savings time selection). (Refer to Setting Date and Time in this section.)
2. Language.
3. AC filter frequency.
4. Height/weight units of measure.
5. WAM pairing (if used). (Refer to the WAM user manual for detailed pairing instructions to the device.)

See Section 6, System Settings, to set language, AC filter frequency, and height/weight units of measure.

Calibrating the Touchscreen Display

The touchscreen display requires calibration upon initial use and at regularly scheduled preventive maintenance intervals as prescribed in the service manual. Once initiated, the ELI 280 automatically begins the calibration sequence (detailed below). Through on-screen prompts, the user will touch strategically placed crosshairs to calibrate the display’s touch point accuracy.

1. Initiate the calibration sequence by touching the + symbol in the upper left corner of the display.
2. Touch the + symbol in the upper right corner of the display.
3. Touch the + in the lower right corner of the display.
4. Touch the + in the lower left hand corner of the display.

Connecting the Acquisition Module

Connect the AM12 to the ECG connector at the rear of the device. When using the optional WAM for ECG acquisition, this connection is not required.
Loading Paper

Figure 2-2

1. Remove packaging and cardboard backing from the paper stack.

2. Facing the front of the device, use the release latch on the left side and slide the paper tray cover to the left.

3. Place the stack of thermal paper into the paper tray such that the grid side of the paper is up when it is pulled over the paper tray cover. The paper cue mark (a small black rectangle) should be in the lower left corner.

4. Manually advance one page of paper beyond the closure point. Make sure the paper lays on the black roller evenly within the channel of the paper door. If paper is not manually advanced evenly, risk of jamming or queue faults increases.

5. Slide paper tray cover to the right until the cover latches in a locked position. You will hear a sharp click when the cover is properly latched.

⚠️ **WARNING:** Risk of injury to fingers in paper door or platen drive mechanisms.

**NOTE:** For proper performance of thermal printer, be certain to use Burdick/Mortara/Quinton-recommended thermal paper.
Configuring the Printer for A4 Paper

If the device was ordered with A4 paper, the paper tray spacer needs to be inserted in the paper tray and the configuration option to use A4 paper needs to be set to YES. A paper tray spacer will not be provided if the device was purchased with standard paper.

To insert the paper tray spacer:

**Figure 2-3**

1. Slide paper tray spacer towards rear wall of paper tray. Align the bottom four plastic arms with the four openings in the base of the paper tray. Similarly, align the top 3 plastic arms with the three openings on the rear wall of the paper tray.
2. The paper tray spacer should be parallel with the rear wall of the paper tray.

Figure 2-5

4. Set configuration option to use A4 paper. (See Section 6.)

5. Gently press on the top three plastic arms to remove the paper tray spacer.
Powering the ELI 280

The ELI 280 is an AC powered and/or battery operated device that can simultaneously charge the internal battery while connected to AC power. It is recommended that it be plugged in to AC power when not in use. The device can be operated on AC line voltage in the absence of a battery or in the event of an otherwise fully depleted battery. When line voltage is removed the device immediately switches to battery power.

Operating on AC Power

- Plug the power cord into an AC wall outlet and into the AC connector on the rear panel of the ELI 280. (Reference Figure 1-3.)
- When the ELI 280 is plugged into AC power, the green AC power LED indicator illuminates below the ON/OFF button.
- Press the ON/OFF button when on battery power or touch the screen when on AC power to illuminate the real-time display.
- A battery icon with an electrical bolt through the battery (seen in the upper right corner of the touchscreen display) confirms that the device recognizes AC power and automatically controls battery charging.

\textit{NOTE:} In the event of complete power loss due to battery removal or a hard reboot (depressing the On/Off button for greater than 7 seconds) the ELI 280 will require a touchscreen recalibration and time/date reset.

Operating on Battery Power

When operating on battery power, the battery icon changes to indicate its status:

- WHITE with a lightning bolt indicates the unit is charging on AC power.
- GREEN indicates battery is between 100% and 35% charge.
- YELLOW indicates battery is between 35% and 20% charge.
- RED indicates battery has less than 20% charge remaining. Immediately plug the ELI 280 into AC power if the battery indicator turns RED.

\textit{NOTE:} Automatic power down occurs approximately 10 seconds after the battery icon starts FLASHING RED. Allow a minimum of 4 hours to recharge a battery to 85% of its charge level. Allow a minimum of 5 hours to recharge a battery to 90% of its charge level. The battery voltage may be viewed in the lower right of the display by selecting the Configuration icon, then selecting About.

\textit{NOTE:} A power down is accomplished by depressing followed by the Off button. To reboot the unit from a complete power down, use the On/Off button.

\textbf{CAUTION:} If the battery voltage falls below 10.5 the device will automatically power down. After recharging long enough for the battery voltage to rise above 10.5V the device may again be operated on battery power. It may require up to 30 hours on AC line voltage to recharge the battery from its lowest level. Routinely discharging a battery to the lowest level will severely shorten the life of the battery.
Low Battery Failsafe Conditions

If the battery depletes to its lowest allowable level, the device will automatically power down to prevent permanent damage to the internal lead-acid battery. Plugging in the AC cord just prior to shutdown and while the message “Battery Low – Charge Unit” is displayed (10 seconds), will prevent the automatic shutdown.

If the battery depletes to its lowest allowable voltage while in ECG acquisition mode, the device will display the message “Battery Low – Charge Unit”, and will continue normal operation until the user exits the ECG acquisition mode. At that time the system will automatically power down allowing the user to complete an ECG already in progress.

Power Status

The ELI 280 has three distinct power states: Power On, Stand-by, and Off.

Power On

Power is automatically turned on when the device is connected to AC power. While powered on the ELI 280 performs all of its functions including display, acquisition, printing and transmission of ECGs.

Stand-By

Stand-by occurs automatically after the system is left idle for longer than 5 minutes without user interaction. The user can also force the unit into Stand-by by pressing the ON/OFF button briefly. To leave the Stand-by mode press either the ON/OFF button or touch the display. All entered patient information is maintained in Stand-by mode and if a patient is connected, the ECG can be acquired. Effectively, only the display is turned off in Stand-by mode.

Power Off

The ELI 280 automatically turns off after 15 minutes in Stand-by mode when on battery power and no patient is connected. The ELI 280 also turns off when battery voltage becomes too low. The operator can force the ELI 280 to Power Off state using the Off button in the screen. The ELI 280 will never automatically turn off when on AC power.

Reboot

Depressing the ON/OFF button for longer than 7 seconds causes the ELI 280 to execute a hard reboot, preceded by the display flashing three (3) times. This will reset the internal clock to the default time and date. A hard reboot causes the system to prompt the user to recalibrate the touch function (by touching the red crosses one at a time), and re-enter the date and time at the next power On. The user can bypass setting the date and time by selecting DONE for immediate ECG acquisition, but this ECG will have the default acquired date. The user must then set the correct date and time manually using the Configuration icon, or, if connected to an ECG management system, by pressing to sync the date and time. The ELI 280 will also reboot after the battery has been disconnected.

NOTE: It is normally NOT NECESSARY to reboot the ELI 280. Only reboot the ELI 280 if the touch screen needs calibration or if you have an unrecoverable problem.
Setting Date and Time

1. Select ☀️ from the real-time display.

2. Select Date/Time.
   a. Touch Year. Use the touchscreen keyboard to type in the correct year, then press Done.
   b. Set the correct Month, Day, Hour and Minute by pressing each appropriate field and using the touchscreen dropdown menu to choose the correct setting. Use the double arrows at the bottom of the menu to view more choices. Select Done to save the new setting. To exit the menu without making a new selection, use Cancel or touch anywhere outside the menu.
   c. Touch Time Zone. Use the dropdown menu to select and touch the appropriate time zone. Use the double arrows to view the next set of time zones. To exit the menu without making a new selection, use Cancel or touch anywhere outside the menu.
   d. Touch Daylight Savings. Select Yes if Daylight Saving Time affects your time zone or No if it does not. To exit the menu without making a new selection, use Cancel or touch anywhere outside the menu.
   e. To set the precise date and time for when Daylight Savings starts and ends, proceed as follows:
      a. Touch either set of double arrows (◀ or ▶) at the bottom of the Set Time/Date screen.
      b. Set the Daylight Saving START Month, Week, Day, Hour and Minute.
      c. Set the Daylight Saving END Month, Week, Day, Hour and Minute.
      d. Select Done to save and exit, or Cancel to exit without saving.

3. Select Done again to return to the real-time display.

Time Synchronization

The SYNC feature allows time synchronization to occur only when the ELI 280 is interfaced to a product which supports ELI Link or E-Scribe.

1. Select ☀️ from the real-time display.

2. Select Advanced.

3. Select System.

4. Select ▶ to advance to the next page.

5. Select Sync Mode.

6. Select Transmit+Orders+Date/Time from the dropdown menu.

7. Select Done to save and exit, or Cancel to exit without saving. Select Done again to return to the real-time display.

NOTE: Select ☀️ at any time it appears to return to the real-time display.

NOTE: This device supports automatic time synchronization with a remote server. Inaccurate time/date settings can result in ECGs marked with inaccurate time stamps. Confirm the accuracy of the synchronized time prior to acquiring ECGs.
**Installing the WLAN Antenna**

The ELI 280 with optional WLAN module ships with the antenna in the accessory box. To install the antenna, perform the following:

1. Locate and remove the antenna from the accessory box.
2. Locate the antenna connector on the back of the ELI 280.
3. Mount the antenna on the connector by rotating the antenna clockwise. The antenna must be finger tight to its connector.
4. Locate the built-in hinge and fold the antenna (it will now be at a 90° angle); continue to rotate the antenna clockwise until it is placed vertically. This will guarantee the best signal for the WLAN module.

   **NOTE:** To configure for WLAN use, see Section 4.

**Using the WAM or AM12 Acquisition Module**

ECG acquisition and rhythm strip printing can also be performed at the WAM or the AM12 acquisition modules. To use the WAM, refer to the WAM user manual. To use the AM12, refer to the AM12 short-form instruction card.

The ELI 280 must be configured at the factory for use with the WAM. If the ELI 280 is configured for use with the WAM, the two devices must be paired to function properly. Please see the WAM user manual for pairing instructions.

   **NOTE:** WAM must be paired to electrocardiograph before operation. Refer to the WAM operators manual for assistance in pairing the WAM.

   **NOTE:** If no patient connection is detected after 15 minutes, the WAM will turn off.
Patient Preparation

Before attaching the electrodes, assure the patient fully understands the procedure and what to expect.
- Privacy is very important in assuring the patient is relaxed.
- Reassure the patient that the procedure is painless and that the electrodes on their skin are all that they will feel.
- Make sure the patient is lying down and is comfortable. If the table is narrow, tuck the patient’s hands under his/her buttocks to ensure their muscles are relaxed.
- Once all the electrodes are attached, ask the patient to lie still and to not talk. Explaining the process to the patient may help relax them further and assist in acquiring a good ECG.

Preparing Patient Skin

Thorough skin preparation is very important. There is natural resistance on the skin surface from various sources such as hair, oil, and dry, dead skin. Skin preparation is intended to minimize these effects and maximize the quality of the ECG signal.

To prepare the skin:
- Shave hair from electrode sites if necessary.
- Wash area with warm, soapy water.
- Dry skin vigorously with a pad such as 2 x 2 or 4 x 4 gauze to remove dead skin cells and oil, and to increase capillary blood flow.

NOTE: With elderly or frail patients take care to not abrade the skin causing discomfort or bruising. Clinical discretion should always be used in patient preparation.

Patient Hookup

Correct electrode placement is important for acquiring a successful ECG.

A good minimum-impedance pathway will provide superior noise-free waveforms. High quality silver-silver chloride (Ag/AgCl) electrodes similar to those provided by Mortara are recommended to be used.

TIP: Electrodes should be stored in an air-tight container. Electrodes will dry out if not stored properly which will cause loss of adhesion and conductivity.

To Attach the Electrodes

1. Expose the arms and legs of the patient to attach the limb leads.
2. Place the electrodes on flat, fleshy parts of the arms and legs.
3. If a limb site is not available, place the electrodes on a perfused area of the stump.
4. Attach the electrodes to the skin. A good test for firm electrode contact is to slightly tug on the electrode to check adhesion. If the electrode moves freely, it needs to be changed. If the electrode does not move easily, a good connection has been obtained.
For accurate V-lead placement and monitoring, it is important to locate the 4th intercostal space. The 4th intercostal space is determined by first locating the 1st intercostal space. Because patients vary with respect to body shape, it is difficult to palpate the 1st intercostal space with accuracy. Thus, locate the 2nd intercostal space by first palpating the little bony prominence called the Angle of Lewis, where the body of the sternum joins the manubrium. This rise in the sternum identifies where the second rib is attached, and the space just below it is the 2nd intercostal space. Palpate and count down the chest until you locate the 4th intercostal space.

**Patient Hookup Summary Table**

<table>
<thead>
<tr>
<th>AAMI Lead</th>
<th>IEC Lead</th>
<th>Electrode Position</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>V1</strong> Red</td>
<td><strong>C1</strong> Red</td>
<td>On the 4th intercostal space at the right sternal border.</td>
</tr>
<tr>
<td><strong>V2</strong> Yellow</td>
<td><strong>C2</strong> Yellow</td>
<td>On the 4th intercostal space at the left sternal border.</td>
</tr>
<tr>
<td><strong>V3</strong> Green</td>
<td><strong>C3</strong> Green</td>
<td>Midway between V2/C2 and V4/C4 electrodes.</td>
</tr>
<tr>
<td><strong>V4</strong> Blue</td>
<td><strong>C4</strong> Brown</td>
<td>On the 5th intercostal space at the left midclavicular line.</td>

</tbody>
</table>
Patient Demographic Entry

Patient demographic information can be entered before acquisition. The entered patient ID fields will remain populated until the ECG signal is acquired. If you attempt to acquire an ECG before patient hookup, the ELI 280 will prompt you to complete patient hookup before proceeding.

To access the patient demographic data entry menu, select from the real-time display. Select at any time it appears to return to the real-time display.

Patient Demographics Formats

The patient demographic labels available are determined by the ID format selected from the configuration settings. In addition to short, standard, or long patient ID formats, the ELI 280 also supports a custom ID format. The custom ID format designed in ELI Link, third party cardiology management systems, or an E-Scribe data management system can be downloaded to the ELI 280. Additional information about the custom ID can be found in Section 5 or in the ELI Link and E-Scribe user manuals.

Manually Entering Patient Demographics

Patient demographics can be completed manually. Manually entered patient demographics are saved after completing the entries and pressing Done.

Use the following steps to manually enter the patient demographics:

1. Select from the real-time display.
2. Touch any of the demographic fields to display a touchscreen keyboard.
3. Once a demographic field is selected, the color of its data box will change.
4. Use the touchscreen keyboard to complete the demographic field. Once completed, touch the next demographic field or press the tab icon. Repeat this process until all the demographic fields have been completed.
   
   NOTE: Do not press Done until the data entry for all fields is complete. Pressing Done prior to completion will return the user to the main screen. Select the Patient Demographic icon to re-enter the Patient Demographic screen and complete the data entry.
5. The Month, Day, and Gender fields will also display a dropdown list when touched for easy selection.
6. When finished, select Done to save and return to the real-time display. Skipped fields will appear as a blank field on the header of the ECG printout.

   NOTE: If no age is entered before acquiring an ECG, the interpretation will default to a 40-year old male. The statement “INTERPRETATION BASED ON A DEFAULT AGE OF 40 YEARS” will be added to the interpretation text.

   NOTE: If an age of zero (0) is used, the interpretation will default to a 6-month old infant. The statement “INTERPRETATION BASED ON A DEFAULT AGE OF 6 MONTHS” will be added to the interpretation text.

   NOTE: A yellow background is used where Mandatory Fields are required (i.e., patient last name, ID, or last name and ID)
Automatically Entering Patient Demographics

Patient demographics can be completed automatically by using an existing patient record in the directory. Use the following steps to automatically enter the patient demographics from an existing patient record:

1. Select from the real-time display.
2. Select Directory.
3. Use the double arrows ( or ) at the bottom of the screen to scroll through the ECG records. To select the desired patient, touch the ECG record.
4. To search by patient name, touch Search Directory at the top of the display.
5. Use the touchscreen keyboard to enter the first few letters of the name or ID and move to the general location of the desired patient record, or continue typing the patient name to obtain a closer proximity.
6. Select the patient’s name from the presented list.
7. Once the desired patient is selected, select New ECG to return to the patient ID screen with all demographic fields populated.
8. Press Done to return to the real time display.

NOTE: The ELI 280 must have ECG input to retain patient demographics.

TIP: Automatically populating demographic fields via the directory is only possible when the ID formats are the same between records.

TIP: Entry of a lower case letter as the first letter in the last or first name will automatically be capitalized.

Optional Bar Code Scanner

The ELI 280 supports bar code scanners with 39, 128 and 2D capabilities. When programmed for the individual facility’s bar code (wrist band), the optional bar code scanner is capable of downloading specific data from the wrist band’s bar code into the patient demographics record.

Specific download capability and utilization with the bar code scanner depends on the data available on the wrist band’s bar code and the configuration of the ELI 280. Refer to the bar code scanner user manual for instructions on setup and use.
ECG Display Setup – Individual ECG

The Display Setup screen allows the user to set the following display configurations for an individual patient: display format, display speed, display (ECG) gain, and display (ECG) filter. Access these configuration choices by pressing anywhere on the touchscreen’s real-time ECG waveform. The display setup returns to the configured setup after each ECG collection.

Display Format:
The real-time 12-lead ECG view can be set to any of the following formats by pressing the desired choice on the touchscreen display: 12x1; 4x2; 6x2; and any three pre-selected leads (i.e. II-V1-V5).

Display Speed:
The real-time display sweep speed and rhythm printout speed can be set to any of the following speeds by pressing the desired choice on the touchscreen display: 5 mm/s, 10 mm/s, 25 mm/s, or 50 mm/s.

Display Gain:
The real-time ECG gain can be set to any of the following amplifications by pressing the desired choice on the touchscreen display: 5 mm/mV, 10 mm/mV, or 20 mm/mV. The Gain setting is printed at the bottom right corner of the ECG printout. The Display Gain setting will also be used on the printed ECG, unless changed in the Acquired screen.

Display Filter:
The ECG filter can be set to any of the following frequency limits by pressing the desired choice on the touchscreen display: 40 Hz, 150 Hz, or 300 Hz for ECG printouts. The Filter setting is printed at the bottom right corner of the ECG printout. The Display Filter setting will also be used on the printed ECG, unless changed in the Acquired screen.

NOTE: Changes to the ECG display setup for an individual ECG only take affect when a patient is connected to the device.

ECG Acquisition and Printing with WAM or AM12

Control buttons located on the WAM and AM12 are available to initiate ECG acquisition and rhythm strip printing. Refer to the WAM user manual or the AM12 short-form instruction card.

ECG Acquisition

ECG data is collected immediately and continuously once the patient is connected to the acquisition module.

For best results, before pressing or , instruct the patient to relax in the preferred supine position to ensure that the ECG is free from motion artifact (noise).

If workflow permits patient demographic entry prior to acquisition, enter the patient identification information as explained in Patient Demographic Entry.

ECG Screen Notification Messages

The VERITAS interpretive algorithm detects Leads Off and Lead Fault conditions. It also detects electrode misplacements based on normal physiology and ECG lead order and tries to identify the most likely switch. If the algorithm detects an electrode lead misplacement, it’s recommended that the user confirm the other electrode positions in the same group (limb or chest).
When the condition that triggered the notification message is addressed the VERITAS collects 10 seconds of new data before analyzing the ECG.

<table>
<thead>
<tr>
<th>Message</th>
<th>Description</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leads Off</td>
<td>Patient is not connected</td>
<td>Connect patient to ECG Leads.</td>
</tr>
<tr>
<td>Lead Fault</td>
<td>Faulty lead(s)</td>
<td>Re-prep and replace electrode(s) if necessary to obtain satisfactory waveform(s).</td>
</tr>
<tr>
<td>“Limb leads misplaced?”</td>
<td>Electrode Wrong Position</td>
<td>Connect the lead(s) correctly to the patient or connect the lead(s) to the proper location.</td>
</tr>
<tr>
<td>WAM Low Battery</td>
<td>Low battery detected in the WAM</td>
<td>Replace the batteries in the WAM.</td>
</tr>
<tr>
<td>Searching for WAM</td>
<td>WAM not detected. WAM may be out of range, powered OFF, depleted battery, or requires additional pairing.</td>
<td>Check WAM proximity to the ELI 280; check WAM AA battery is new and that the WAM is powered ON.</td>
</tr>
</tbody>
</table>

**NOTE:** In the event of a lead fault or lead misplaced message the clinician may force ECG acquisition by depressing the ECG button again.

**ECG Electrode Placement Troubleshooting**

Please refer to the following troubleshooting guide based on Einthoven’s Triangle:

<table>
<thead>
<tr>
<th>Artifact</th>
<th>Check Electrode</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lead II and III artifact</td>
<td>Poor LL electrode or left leg tremor</td>
</tr>
<tr>
<td>Lead I and II artifact</td>
<td>Poor RA electrode or right arm tremor</td>
</tr>
<tr>
<td>Lead I and III artifact</td>
<td>Poor LA electrode or left arm tremor</td>
</tr>
<tr>
<td>V Leads</td>
<td>Re-prep site &amp; replace electrode</td>
</tr>
</tbody>
</table>
Press . The real-time ECG view is then replaced with the acquired ECG view. The default real-time ECG view is not available in the acquired ECG view for navigation purposes.

**NOTE:** New Function Icons are available in the acquired ECG view.

**NOTE:** Functions are not available during acquisition.

**Acquiring a STAT ECG**

To acquire an emergency (STAT) or unidentified ECG for a new patient prior to entering patient demographics, follow the instructions below:

1. Select from the real-time display.

2. Select a second time. The ECG will be acquired.

3. The messages “Collecting 10 seconds of data,” followed by “Captured,” “Analyzed, and “Formatted” appear in the top left corner of the display.

4. Once completed, the acquired ECG displays on a red grid background.

5. To return to the real-time display without entering patient demographics, select **Done**. The ECG can be found in the directory by acquisition date.

**Adding Patient Demographics after a STAT ECG**

Use the following steps to add patient demographics immediately after acquiring a STAT ECG:

1. From the acquired ECG screen, select .

2. If the STAT ECG is for an existing patient, select **No**. Enter the patient demographics as described earlier in this section. When patient data is complete, select **Done** to return to the acquired ECG view. Select **Done** again to save and return to the real-time display.

3. If the STAT ECG is not for an existing patient, select **Yes**. Manually complete the demographic fields or select the existing demographics from the patient directory as described earlier in this section. Select **Done** to save and return to the real-time display.

4. From the acquired ECG view, select **Print** or **Send**. To return to the real-time display select **Done**. Select **Erase** to delete the STAT ECG and return to the real-time display.
**Best 10 Seconds of ECG**

The ELI 280 incorporates a 5-minute memory buffer for collection of ECG data. When Best10 is enabled, the device will automatically select the best 10 seconds of ECG data from within the 5-minute buffer. The best 10 second determination is based upon measurement of high and low-frequency noise found in the 10-second ECG segments.

When Last10 is selected the device will automatically present the last ten seconds of ECG from the data stored in the memory buffer.

**Selecting Best 10 or Last 10**

1. Select \[\text{ECG}^+\] from the real-time display to acquire an ECG.
2. From acquired ECG view, touch anywhere on the red grid ECG to open the configuration screen.
3. Select **Best10** or **Last10**.
4. Select **OK** to save the selection, and reformat, print, and display the ECG. Select **Cancel** to exit without saving.

   **NOTE:** If a single limb lead or two precordial lead fail condition occurs, the Best 10 feature is disabled until the limb lead fail or precordial lead fail condition is resolved. Once the condition is rectified the Best 10 feature automatically becomes available.

**Configuring the ECG Report**

The ELI 280 can automatically print up to nine copies of the ECG report following acquisition. Print format, trace speed, ECG gain, ECG filter setting and pacer channel can be set as a default in the Configuration menu, or configured per ECG by touching the red grid screen display. This will allow for selection of plot format, gain, speed, and filter setting change for the selected patient.

**To change print format of an acquired ECG**

1. From acquired ECG view, touch anywhere on the red grid ECG to open the configuration screen.
2. Select the desired choices for Print Format, Print Speed, Print Gain, Print Filter and Pacer Channel.
3. Select **OK** to save the selection, and reformat and display the ECG. Select **Cancel** to exit without saving.
4. Select **Print, Send, Erase**, or **Done**.
To automatically print (or not print)

1. Select 🔄 from the real-time display.
2. Select Advanced followed by ECG.
3. Use the double arrow (𝐫𝐫) to locate the # Copies: setting.
4. Touch the number of copies field and select the desired number of copies from the dropdown menu. Select 0 to ensure the printer does not automatically print the ECG following acquisition.
5. Select Done to save and return to the Configuration menu, or select Cancel to return without saving.

Acquired ECG Storage

Print, send, erase, save, or view the interpretation for an acquired ECG by following the steps below:

1. Select 🔄 from the real-time display to acquire an ECG.
2. From acquired ECG view, press the double arrow (𝐫𝐫) to advance through the report interpretation. Press the double arrow (𝐫𝐫) to return to acquired ECG view.
3. Press Print to initiate a printout.
4. Press Send to transmit the report to an ECG management system.
5. Press Erase to delete the record from the directory.
6. Press Done to save the record to the directory and return to real-time display. The message “Saving” will confirm storage.

Acquiring Rhythm Strips

You can print a rhythm strip of the real-time ECG viewed on the display. Rhythm strips from the real-time ECG display can be acquired with the patient connected to the ELI 280 and after patient identification information is entered. A rhythm strip may also be printed without entering the patient ID by selecting 🔄.

NOTE: Printed rhythm acquisitions are not stored in the ELI 280.

The rhythm strip’s display format, trace speed, ECG gain and ECG filter setting can be configured to a variety of settings by performing the following steps:

1. From the real-time display, touch anywhere within the ECG display to view the setting choices.
2. Select the desired choices for Display Format, Display Speed, Display Gain and Display Filter.
3. Press OK to save the settings, and reformat and display the ECG. Select Cancel to return without saving.

To stop a rhythm print, press 🔄 and the writer will automatically stop, allowing the user to start acquiring additional data with new time stamp and demographics if required.
ECG Transmission

The ELI 280 can transmit acquired ECG records to an E-Scribe system, ELI Link or to a third-party electronic medical record (EMR) system. The interface to these systems can be via direct connection, factory installed internal modem (optional), LAN or WLAN connection, using UNIPRO 32, or DICOM 32 protocols.

Before transmitting ECGs, certain configuration options must be set in system settings depending upon the transmission media used and the electronic storage media being transmitted to (see Section 6 for details).

**NOTE:** Telephone transmission is available with internal modem only.

**NOTE:** In order to properly connect to telephone lines, the ELI 280 internal modem needs to be set on the proper country code. This is an internal setting and should not be confused with International calling codes.

**NOTE:** Select at any time it appears to return to the real-time display.

In order to transmit ECGs the WLAN signal must be strong enough to transmit. WLAN performance may vary due to changes in RF (radio frequency) properties at your site or to environmental conditions. Signal strength can be measured using a utility available in the ELI 280 menu.

### Testing RF signal strength

1. Select from the real-time display.
2. Select Advanced.
3. Select Network.
4. Signal strength displays as zero to five bars with zero being no RF signal strength and five bars being full RF signal strength.
5. If an adequate signal is not being obtained, move to a location where more bars display before attempting to transmit.

**NOTE:** Intermittent connectivity in certain areas of your facility often indicates the need to re-initiate the transmission process. Consult the IT department at your facility or your Mortara Field Service Engineer regarding modification of your WLAN to improve system performance.

**NOTE:** Ensure the system has been configured to the area network before attempting a RF signal strength test.

### Transmitting Records to the Cardiology Management System

To transmit a record to the cardiology management system, press Send from the acquired ECG view.

To transmit all un-transmitted records, press from the real-time display.
Local Area Network (LAN) Connection and Setup

NOTE: LAN functionality can be confirmed by the presence of the LAN icon in the Settings menu.

The ELI 280 must be configured for LAN transmission by the facility Information Technology (IT) professional:

1. Connect the ethernet cable from the facility’s local area network to the LAN connection at the rear of the ELI 280.

⚠️ CAUTION: Possible damage to the electrocardiograph may occur if a telephone cable is connected to the LAN connector.

2. Select 🌠 from the real-time display.

3. Select Advanced.

4. Select LAN.

5. Addresses are always entered as 4 sets of 3 digits therefore an address of 192.168.0.7 must be entered on the ELI 280 as 192.168.000.007.

   a. LAN/WLAN settings may be password protected when printing the configuration. If the password is entered, users will be able to view these settings on the screen; however, all printouts will print “*****” instead of the actual values.

6. Select Done.

Ethernet Transmission Status Indicator LEDs

The operator can monitor LAN interface connection and data transmission by observing the LEDs (Light Emitting Diodes) located at the system’s external connector. The LEDs can be viewed from the outside (rear) of the ELI 280.

<table>
<thead>
<tr>
<th>LED LOCATION</th>
<th>STATUS</th>
<th>INDICATES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Left LED</td>
<td>Dark</td>
<td>ELI 280 is in the Off state.</td>
</tr>
<tr>
<td>Left LED</td>
<td>Illuminated</td>
<td>Network link is detected, ELI 280 is On or in Stand-by.</td>
</tr>
<tr>
<td>Right LED</td>
<td>Flashing</td>
<td>When transmit or receive network traffic is detected.</td>
</tr>
</tbody>
</table>

NOTE: The ELI 280 LAN will support 10 and 100 MBPS networks.
Wireless Local Area Network (WLAN) Connection and Setup

**NOTE:** WLAN functionality can be confirmed by the presence of the WLAN icon in the Settings menu.

The facility Information Technology (IT) professional must:

- Configure the wireless access point(s).
- Configure the E-Scribe workstation.
- Provide the ELI 280 WLAN configuration values.

To set up the ELI 280 for WLAN transmission:

1. Select ☁️ from the real-time display.
2. Select **Advanced**.
3. Select **WLAN**.
4. Configure the ELI 280 for Dynamic Host Communication Protocol (DHCP) or static IP. Wireless security encryption options include:
   - WEP
   - WEP 128
   - WEP 64
   - WPA-PSK
   - WPA–LEAP
   - WPA-PSK64
   - WPA-PSK128
   - WPA-LEAP64
   - WPA-LEAP128
   - WPA2-PSK
   - WPA2-PEAP

**NOTE:** Environmental conditions may affect the reliability of WLAN transmissions. Set or change the WLAN Connect setting from the Settings menu.

If DHCP is set to NO, your wireless access point will have a static network setting and the following parameters must be configured in the device:

- IP Address
- Default Gateway
- Sub Net Mask

If DHCP is set to YES, your wireless access point will have an automatic network setting and IP address. The default gateway and sub net mask do not need to be configured.
In either DHCP setting, the following wireless network parameters must be provided by the IT professional:

- Host IP
- Port Number
- SSID
- Channel Number
- Password or passphrase

*NOTE:* Addresses are always entered as 4 sets of 3 digits; therefore, an address of 192.168.0.7 must be entered on the ELI 280 as 192.168.000.007.

If WEP wireless security is disabled on your access point, then set security (WEP) to None.

If WEP wireless security is enabled on your access point, the following wireless network parameters must be configured in the device by the IT professional:

- Security: WEP
- WEP Key
- WEP Key ID

*NOTE:* The range for the WEP key is 0-3. If the range on your access point is 1-4, then 0 at the ELI 280 maps to 1 on the access point; 1 maps to 2 on the access point, etc.

If your wireless security environment is WPA or WPA2 (Wi-Fi Protected Access) then enter the following:

- Security: WPA-PSK or WPA2-PSK
- Passphrase

*NOTE:* The passphrase length is limited to 64 digital Hex Value characters or 63 ASCII characters.

If your wireless security environment is LEAP then enter the following:

- Security: WPA-LEAP or WPA2-PEAP
- LEAP or PEAP User Name
- LEAP or PEAP Password

*NOTE:* LEAP user name and password are limited to 63 characters.

*NOTE:* Allow the ELI 280 several seconds to complete saving the WLAN configuration.

**Transmission Media Auto-Sync**

The ELI 280 automatically identifies the default transmission media. Connectivity options which have been optionally purchased and installed will be available for default selection. The electrocardiograph will automatically detect the communication device and automatically connect to it.
USB Connectivity

Transmission using the USB host port to a USB memory stick

USB memory communication media permits storage of patient records to an external USB memory stick. The files will be saved in UNIPRO32 format for transfer to the E-Scribe or a compatible electronic information management system.

**NOTE:** Device is compatible with FAT32 formatted USB memory sticks.

**NOTE:** The USB memory stick must not contain any automatic features (e.g., Sandisk U3). Uninstall any features from the memory stick before connecting it to the device.

**NOTE:** All communication options (MODEM, LAN, WLAN) including time sync and orders download are disabled when a USB memory stick is inserted in the device.

**NOTE:** Upon successful transmission the device display will state “Transmission status transmit complete. Press any key to continue.” The total number of patient records transmitted to the USB memory stick will also appear.

**NOTE:** Patient records transmitted to a USB memory stick are marked as transmitted by the device.

**Transferring Individual Patient Records to the USB Memory Stick**
- Place the USB memory stick into the USB host port on the back of the device.
- Select from real-time ECG view.
- Select **Directory**.
- Select the patient record to be stored to the USB memory stick.
- Select **Transmit**.

**Transferring Batch Patient Records to the USB Memory Stick**
- Place the USB memory stick into the USB host port on the back of the device.
- Select **SYNC**.
- Select **Done** when transmission is complete.
Transmission using the optional USBD (device) port to a PC

The USBD port permits transmission of stored patient records to a PC using a direct USB cable. The patient records will be transmitted to an ELI Link application (requires V3.10 or later) and then exported and saved in various formats (see the ELI Link user manual).

Connecting the ELI 280 to a PC

When connecting the device to a PC for the first time, the proper USB driver will need to be installed prior to use.

- Use a USBD cable to connect the device to a PC.
- When properly connected, the PC will automatically detect the device and automatically install the drivers.
- You will be required to power the ELI 280 on by pressing the On/Off button for a period of three seconds.

Transmitting Patient Records to ELI Link

- Create both an Input folder and Output folder on the PC.
- Configure ELI Link to the individual Input and Output folders.
- Connect the ELI 280 to the PC.
- “USB Device ready” will appear on the device display; a “Removable Disk” message will display on the PC.
- Using the PC mouse, select Records from the removable disk window displayed on the explorer window.
- Select the patient record(s) to be copied.
- Place the copied record(s) into the Input folder on the PC.
- After a period of 5 seconds, select the copied record(s) to view on the PC or print via PDF from the Output folder.

NOTE: Requires ELI Link V3.10 or later. See ELI Link user manual for further detail on settings.

NOTE: User must create an Input and Output folder for records to be stored or retrieved for use in ELI Link.

NOTE: Patient records transmitted to ELI Link are not marked as transmitted by the device.

⚠️ WARNING: Do not change or modify any information existing in any of the ELI 280 folders that are visible on the PC in the removable disk file.

⚠️ CAUTION: To assure consistent operation and avoid confusion, connect only one ELI 280 using the USB device port to a PC at a time.

- Unplug the USBD cable and power the ELI 280 On.
ECG Directory

The standard ECG directory saves up to 40 individual ECG records. The optional expanded memory permits up to 200 ECGs to be stored.

To access the ECG directory, select from the real-time display, followed by Directory.

Sort the directory by Name or ID by touching the header of choice.

Use the double arrows ( or ) at the bottom of the screen to move page by page through the list of acquired ECGs. The number of pages, as well as the current page, displays to the left of the double arrows.

When a patient from the directory is selected, a second window (sub directory) will display all of the ECG records stored in the directory for that patient, along with the date and time of each acquisition. Records that have been printed, transmitted, or deleted will be indicated by a √ in the appropriate column.

NOTE: Records are automatically deleted through a first in-first out process when the maximum number of records has been reached.

NOTE: A password may be required before entry into the ECG directory. Obtain the password from the department Administrator.

NOTE: Select at any time it appears to return to the real-time display.

Searching ECG Records

To search the directory by patient name:

1. Select from the real-time display, followed by Directory.
2. Select the Name column header.
3. Select Search Worklist and a touchscreen keyboard will appear.
4. Use the touchscreen keyboard to enter the first few letters of the last name and move to the general location of the desired patient record, or continue typing the patient name to obtain a closer proximity. Use Cancel to return to the directory without using the search feature.
5. Select the patient’s name from the presented list. Use Back to return to the directory.
6. To search by ID, DOB or Last ECG, select the desired column header before selecting Search Worklist.

To exit the directory, select Done. Select Done again to return to the real-time display.

NOTE: Use the double arrows ( or ) at the bottom of the screen to move page by page through the list of acquired ECGs. The number of pages, as well as the current page, displays to the left of the double arrows.
**Reviewing ECG Records**

To review an existing patient ECG record:

1. Select 🕓 from the real-time display, followed by **Directory**.
2. Navigate to the desired patient record, and select.
3. Select the desired acquired ECG from the sub directory.
4. Once selected the acquired ECG will display.
5. To change the format of the acquired ECG touch the display and select the desired settings for Print Format, Print Speed, Print Gain, Print Filter and Pacer channel.
6. Select **OK** to save and return to ECG display, or **Cancel** to exit without saving.
7. To view the interpretation, select ➤. Select ➤ again to return to the displayed ECG.
8. Select **Print** to print the acquired ECG; use **Stop** to stop printing. To transmit the acquired ECG use **Send**; to delete use **Erase**.
9. Select **ID** to enter or edit demographic information (if required) after ECG acquisition.
10. Select **Back** to return to the sub directory. Select Back again to return to the ECG directory.

To acquire an additional ECG using the existing demographics:

1. Navigate to the sub directory for the desired patient.
2. Select **New ECG** followed by **Done**.
3. To acquire the new ECG, select 🎈. Once completed, the acquired ECG displays on a red grid background.
4. Change the format by touching the display and selecting the desired settings for print format, print speed, print gain, print filter, pacer channel and Best 10/Last 10. Select OK or Cancel to save or discard the changes. With the tracings displayed you can select print, send, or erase the new ECG record.
5. Use **Done** to save the new record and return to the sub directory.
Deleting ECG Records

Management of the ECG record is performed within the sub directory of stored ECGs. The desired record must be selected in order to view, print, edit or add demographics, or erase the record.

An ECG may be stored in the directory but have a “deleted status” (indicated by “√” in the column under deleted but in the same row as the name). The directory saves records marked for deletion in the event that the record needs to be reviewed or printed at a later time.

*NOTE:* Records are automatically marked for deletion based on the delete rule configuration (see Section 6, Configuration Settings: ECG).

Stored ECGs will remain in the directory until the memory becomes full. Only those records that have been marked for deletion will be removed when necessary to store a newly acquired ECG.

Erasing ECGs from the Directory

1. Select from the real-time display, followed by Directory.
2. Navigate to the desired patient record and select. All acquired ECGs for that patient will display.
3. Select ERASE ALL to erase all of the ECGs in the selected patient record, or
4. Select the desired ECG from the patient record followed by ERASE.

Printing the ECG Directory

1. Selecting Print from the bottom of the ECG directory display will generate a printout of the entire ECG directory (up to 200 records; 40 records per page). Use Stop to stop printing.
2. Select Done to return to the Patient Demographics page; select Done again to return to the real-time display.

ECG Orders

The ECG Orders (MWL) directory saves up to 256 ECG pending orders. Orders are displayed with name, ID, patient location, patient room number, and date/time of order.

The Orders menu allows the user to download or print orders, as well as load a query for a certain location in the facility. Sort, navigate and/or search ECG Orders in the same manner as the ECG Directory.

*NOTE:* Each time orders are downloaded the ELI 280 will automatically refresh the orders list. Orders that have been executed, canceled or deleted will be automatically eliminated.
Searching ECG Orders

To search the directory by patient name:

1. Select ▶️ from the real-time display, followed by MWL.
2. Select the Name column header.
3. Select Search Worklist and a touchscreen keyboard will appear.
4. Use the touchscreen keyboard to enter the first few letters of the last name and move to the general location of the desired patient record, or continue typing the patient name to obtain a closer proximity. Use Cancel to return to the directory without using the search feature.
5. Select the patient’s name from the presented list. Use Cancel to return to the Search function. Use OK to return to the real-time display and acquire an ECG for the selected patient, or use Edit to edit the patient demographics for the selected patient. When editing is complete, use Done to return to the real-time display and acquire an ECG for the selected patient.
6. To search by ID, Location, Room, or Date/Time the order is scheduled to be performed, select the desired column header before selecting Search Worklist.
7. To exit the directory, select Done. Select Done again to return to the real-time display.

NOTE: Use the double arrows (← or →) at the bottom of the screen to move page by page through the list of orders. The number of pages, as well as the current page, displays to the left of the double arrows.

NOTE: The ELI 280 will maintain the last selected queried location used in the search process to help expedite work flow.

NOTE: When reviewed, the selected order will display the scheduled date and time of the order at the right of the demographics.

Worklist Management

The ELI 280 can download and process ECG order lists from the E-Scribe or another compatible information management system which identifies the ECG(s) (or ECG orders) needed for particular patients. Implementation of an order-based workflow can significantly reduce demographic data-entry errors at the electrocardiograph. Orders are deleted from the list when the ordered ECG is acquired, and the MWL listing is refreshed.

Sync Command

Use 🔄 to transmit an acquired ECG to a cardiology management system, transmit and request a download of the MWL, or transmit, request a download of the MWL and synchronize the date and time.

NOTE: This device supports automatic time synchronization with a remote server. Inaccurate time/date settings can result in ECGs marked with inaccurate time stamps. Confirm the accuracy of the synchronized time prior to acquiring ECGs.
**MWL Query**

MWL query codes may uniquely identify a location or department. Query codes may be assigned to a staff member or an electrocardiograph. Use the Query Code drop-down menu from the ECG Orders directory to select orders specific to that query code or location.

Once a query code is selected it will serve as the default query code for that particular ELI 280, or until a different selection is made. Select None to erase the last query code used.

**Custom ID Download**

Custom ID formats are uniquely defined by your facility’s needs. This customized ECG header information is designed in ELI Link or an E-Scribe system and downloaded to the ELI 280.

To download and set a Custom ID format:

1. Select 🌟 from the real-time display.
2. Select **Custom ID**.
   
   **NOTE**: Alternatively, select Advanced from the Configuration menu followed by selecting Custom ID. (A password is required to enter Advanced settings. See Section 6.)
3. “Attempting Network Connection” will display followed by “Connected,” and finally “Custom ID downloaded.”
4. Select **Done** to return to the Configuration menu; select Done again to return to the real-time display.
5. The Custom ID is retained for all future ECGs until a different ID format is downloaded, or Short or Long format is selected from the Settings menu located under System. The set Custom ID format will not be lost due to power loss or failure, or when switching to a different ID format.
6. Set the ID format configuration to short, long, or custom depending on the facility’s patient demographic-entry needs.

   **TIP**: Upon Custom ID download, the ID format will assume the demographic layout as designed in ELI Link or E-Scribe.

   **NOTE**: The site number must be configured in the electrocardiograph and recognized as an established, valid site number in ELI Link or E-Scribe before downloading the Custom ID.

   **TIP**: Communication configuration parameters must be set before downloading the Custom ID from ELI Link or E-Scribe.
## System Settings

### Menu Commands and Utilities

To access system settings, select ![Settings](image) from the real-time display. Select **Advanced** for extended settings. Extended settings are password protected; the factory password is “admin”.

**NOTE:** Select ![Home](image) at any time it appears to return to the real-time display.

</table>
Security

The Administrator password controls several functions and should be created and secured with care. Log the Administrator password in a location where it can be accessed during an emergency as well as in a backup location in case the primary location is compromised. The ELI 280 is preset with the case-sensitive Administrator password “admin.” To change the Administrator password, see Setting Passwords.

The Administrator password enables:

a. Access to the Configuration menu which controls all other passwords.

b. Creation of a new password that can be required to access the Set Password function.

c. Creation of a technician-level password that can be required to access the ECG or MWL directories.

Setting Passwords

To set or change the Administrator and Technician passwords:

1. Select \[\] from the real-time display.

2. Select Advanced followed by Passwords. (A password is required to enter Advanced settings.)

3. Touch the appropriate password field and use the touchscreen keyboard to enter the new password. Retype the new password in the appropriate Confirm field.

4. Select Done to save and return to the Configuration menu, or Cancel to return without saving.

**NOTE:** Factory preset password is “admin”.

**NOTE:** Passwords are case sensitive.

**NOTE:** Technician password allows for entry into the ECG or MWL directories only if selected.

Configuration Settings: About

Serial Number

This indicator allows the user to see the serial number of the electrocardiograph.

Software Version

This indicator allows the user to see the software version of the electrocardiograph.

Interp

This selection allows the user to see whether automatic ECG interpretation is available on the device.
Memory Capacity

This indicator allows the user to see the storage capacity that the electrocardiograph currently possesses. The standard capacity is 40 records. The expanded capacity (optional) is 200 records.

Multi-Protocol

This utility is most frequently used in pharmaceutical research facilities. It allows the user to simultaneously run up to three protocols.

DICOM

This indicator allows the user to see if DICOM bidirectional communication is switched ON or OFF.

USB Device

This indicator allows the user to see if the ability to transmit data using a USB device if available.

LAN

This indicator allows the user to see if Local Access Networking is in use (available) on the device.

WLAN

This indicator allows the user to see if Wireless Local Access Networking is in use (available) on the device.

LAN MAC

This indicator allows the user to see the Local Access Network Mac address.

WLAN MAC

This indicator allows the user to see the Wireless Local Access Network Mac address.

Bar Code Scanner

This indicator allows the user to see if a bar code scanner is in use (available) or not in use (not available).

Battery Voltage

This indicator allows the user to see the ELI 280’s current battery voltage.
Configuration Settings: System

Language

There are several languages available on the electrocardiograph.

⚠️ CAUTION: Function labels are immediately translated upon selecting a new language and exiting the configuration screen.

In the event that an unknown language is viewed, use the following steps to set the language of your choice:

1. Select 🛠️ from the real-time display. (Enter password if required.)

2. Select Advanced, followed by System. (A password is required to enter Advanced settings.)

3. Touch the language field; use the drop-down list to select the appropriate language.

4. Select Done to save and return to the Configuration menu, or select Cancel to return without saving

**NOTE:** The touchscreen keyboard will contain the characters appropriate to the selected language.

Volume

This control sets the loudness when a key on the touchscreen keyboard is pressed. Available settings are Off, Low and High.

ID Format

This control allows the user to define the format for the patient demographic information field prompts. There are three available formats: short, long and custom. A Custom ID format can be downloaded from ELI Link or an E-Scribe system. See Section 5 for details on how to download a Custom ID.

The short format contains the patient’s last name, patient’s first name, ID number, gender and date of birth. The system automatically calculates the patient age from the DOB.

The long format contains the patient's first name, patient’s last name, ID number, age, height, weight, gender, race, medications, location, room and comment fields.

Height Units

This selection allows the user to set the units of measure to inches (in) or centimeters (cm).
Weight Units

This selection allows the user to set the units of measure to either pounds (lb) or kilograms (kg).

Sync Mandatory Demographic Fields

The required field(s)s necessary to transmit a record to an electronic medical record system can be set to Last Name, ID, or Last Name + ID. To be able to transmit a record without any required fields, set to None.

Cart Number

This control allows the user to assign an ELI 280 with a cart number from 0 to 65535 in order to identify which system acquired or transmitted a particular ECG.

Use A4 Paper

The ELI 280 accommodates use of Z-fold thermal paper in either letter size (8.5 x 11 inches; 216 x 279 mm) or A4 size (8.27 x 11.69 inches; 210 x 297 mm).

**NOTE:** A provided spacer needs to be present in the paper tray for A4 paper as well.

Site Number

This control allows the user to specify the location of the ELI 280 using a site number. Site numbers designate the hospital, clinic, or institution for ECG records stored in an E-Scribe or approved third-party cardiology management system and must be defined for transmitting and retrieving ECGs from that system. Up to four digits (0–4095) are supported to assign a site number. Up to three sites can be defined when multi protocol is enabled.

Site Name

This control allows the user to name the clinic, hospital or office where the ELI 280 is located. The site name prints at the bottom, left edge of the ECG printout. Use up to 30 alphanumeric characters to create a specific site name. Up to three sites can be defined when multi protocol is enabled.

Sync Mode

This control allows the user to set the transmission option when synchronizing with the electronic medical record system. Synchronization can be set to None, Transmit, Transmit+Orders, or Transmit+Orders+Date/Time.

**NOTE:** This device supports automatic time synchronization with a remote server. Inaccurate time/date settings can result in ECGs marked with inaccurate time stamps. Confirm the accuracy of the synchronized time prior to acquiring ECGs

Communication Protocol

This control allows the IT professional to set the communication protocol to UNIPRO32, DICOM32, or DICOM32ext.

**NOTE:** This setting must be entered under the direction of the IT professional at the facility where the device is installed.
Caps Lock

All character entry is translated to uppercase.

Bar Code Format

Enabling this option will allow for the use of a Mortara approved USB bar code scanner and set the Bar Code scanner to recognize a date format of MM/DD or DD.MM.

Configuration Settings: ECG

AC Filter

This selection allows the user to remove 60 Hz or 50 Hz interference on the ECG trace. The setting selected depends on the line frequency in the host country. Always use the 60 Hz setting in the U.S. If AC interference is frequently present on the ECG signal, make sure the proper AC filter frequency has been selected.

Filter

This selection allows the user to select the appropriate filtering for the desired trace results. The band-pass filter that is selected attenuates higher frequency noise and affects the fidelity of the electrocardiograph as viewed on the display and on the printed hard copy. The filter setting is printed at the bottom right corner of the ECG printout, and may also be viewed on the upper right-hand corner of the real-time display. Settings include:

1. The 40 Hz print-filter (0.05 to 40 Hz) setting reduces the noise from frequencies above 40 Hz.
2. The 150 Hz print-filter (0.05 to 150 Hz) setting reduces the noise from frequencies above 150 Hz (default).
3. The 300 Hz print-filter (0.05 to 300 Hz) setting reduces the noise from frequencies above 300 Hz. This setting provides the least filtering and highest fidelity ECG signal to the printed and displayed ECG; this setting is recommended for pediatric ECG’s.

**NOTE:** The plot-frequency filter does not filter the digitized signal acquired for interpretation of the ECG.

**NOTE:** The 40 Hz filter significantly reduces high frequency components of the ECG and pacemaker spike amplitudes, and is recommended only if high frequency noise cannot be reduced by proper procedures.

**NOTE:** The Filter setting can also be changed for a single ECG by touching anywhere on the ECG waveform in the real-time or acquired view.
Interp

This selection allows the clinician to turn the ECG interpretation statements On/Off for presentation on the display and/or plotted report.

**NOTE:** The ECG interpretations offered by the device are intended to be most relevant when used in conjunction with a physician over-read and with consideration of all other relevant patient data.

Reasons

This selection allows the clinician to include additional information about the ECG interpretation on the printout. Reasons statements are specific details that indicate why a particular interpretive statement was chosen. Reasons statements print in brackets [ ] within the interpretive text. Reasons are only available if the interpretation statements option is enabled. Turning the reasons statement function ON or OFF does not affect the measurements criteria or the interpretive statement selected by the analysis program.

**For Example:**

Anteroseptal Infarct [40+ ms Q WAVE IN V1-V4]

“Anteroseptal Infarct” is the interpretive statement.

“40+ ms Q WAVE IN V1-V4” is the reason statement explaining the interpretive statement.

Append

This selection allows the user to add a status message or statement phrase to the ECG to be printed under the interpretive text printout. The choices are “UNCONFIRMED REPORT” or “Reviewed by.”

Delete Rule

The Delete Rule allows the user to define how and when ECGs are automatically marked for deletion in the ECG directory. ECGs can be marked manually or marked for deletion per the Delete Rule. ECG records are only fully deleted from the directory when the directory becomes full. When the memory is full, ECGs that are marked for deletion will be automatically deleted based on their acquisition date and time (first-in/first-out) to make room for new ECG records. More than one ECG record may be removed from the directory to make room for the new incoming record.

The Delete Rule selections are:

1. Post Plot = ECG is automatically marked for deletion after printing
2. Post Transmit = ECG is automatically marked for deletion after transmission
3. Post Plot/Transmit = ECG is automatically marked for deletion after transmission and printing

**NOTE:** A record may be permanently deleted by selecting the record, followed by selecting Erase from the left side of the display. A window will be presented as “Erase ECG?” If you select Yes the record will be permanently erased. If you select No the record will be maintained in the file.
**Average RR/QTCB/QTCF**

Enabling this option will allow the following to appear on the report:

- an averaged RR value.
- a Bazett’s corrected QT value along with the default linear QTc value.
- a Fridericia corrected QT value along with the default linear QTc value.

**ECG Capture**

Defines whether or not the ELI 280 will automatically display the Best 10 seconds of data acquired or the last 10 seconds of data acquired.

*NOTE: The ECG Capture Mode can also be changed for a single ECG by touching anywhere on the ECG waveform in the acquired view.*

**Pace Spike Channel**

This control allows the user to decide and set as a default, whether a pacemaker spike notification marker will display at the base of the ECG printout. A pacemaker spike notification marker coincides with each pacemaker event.

*NOTE: The Pacemaker Spike Channel setting can also be toggled on or off for a single ECG by touching anywhere on the ECG waveform in the acquired view.*

**ECG Display Speed**

This control allows the user to set the default display speed to 5 mm/s, 10 mm/s, 25 mm/s or 50 mm/s for ECG viewing.

*NOTE: The Display Speed can also be changed for a single ECG by touching anywhere on the ECG waveform in the real time view.*

**ECG Print Speed**

This control allows the user to set the default paper speed to 25 mm/s or 50 mm/s for ECG printouts.

*NOTE: The Print Speed can also be changed for a single ECG by touching anywhere on the ECG waveform in the acquired view.*

**Number of Copies**

This utility allows the user to select the number of printed copies that automatically print when an ECG is taken. A zero (0) setting prints no copies. Selecting one (1) prints the original copy, two (2) prints the original plus one copy, and so on up to 9 copies.

**Copies with Interpretation**

This utility allows the user to select the number of printed copies containing interpretation when an ECG is taken. A zero (0) setting prints the first ECG with interpretation and all consecutive copies up to nine (9) printed without interpretation. Settings from one (1) to nine (9) contain an ECG interpretation on that number of selected printed copies. All copies display patient demographics and measurements.
Cabrera

Defines whether or not the ELI 280 will automatically display the ECG in the Cabrera format. The Cabrera format displays the limb leads in the order aVL, I, -aVR, II, aVF, III, instead of the standard I, II, III, aVR, aVL, aVF, allowing a different presentation of waveform progression in the vertical plane.

Print Format

This control allows the user to set the default for one of the available print formats in either standard or Cabrera presentation. Regardless of the print format selected, 10 seconds of 12 leads are always stored.

ECG print options are:

<table>
<thead>
<tr>
<th>Format Option in 12-lead mode</th>
<th>ECG Data</th>
</tr>
</thead>
<tbody>
<tr>
<td>3+1</td>
<td>2.5 seconds of 12 leads in a 3-channel format, plus 10-second rhythm strip of one user-selectable lead in a 1-channel format.</td>
</tr>
<tr>
<td>6</td>
<td>5 seconds of 12 leads in a 6-channel format.</td>
</tr>
<tr>
<td>3+3</td>
<td>2.5 seconds of 12 leads in a 3-channel format, plus 10-second rhythm strip of user-selectable leads in a 3-channel format.</td>
</tr>
<tr>
<td>12</td>
<td>10 seconds of 12 leads in a 12-channel format placing one lead over the other.</td>
</tr>
<tr>
<td>6+6</td>
<td>10 seconds of 12 leads in a 6-channel format.</td>
</tr>
</tbody>
</table>

*NOTE:* The Print Format can also be changed for a single ECG by touching anywhere on the ECG waveform in the acquired view.

3 + 1 Rhythm Lead/3 + 3 Rhythm Leads

These settings allow the user to select the three lead configurations for the 10-second Rhythm Leads for the 3+1 channel and 3+3 channel ECG printout.

*NOTE:* Rhythm acquisition is not stored in memory, only printed.

*NOTE:* See Section 3 to acquire a rhythm printout.

Rhythm Print Speed

This control allows the user to set the print speed to 5 mm/s, 10 mm/s, 25 mm/s, or 50 mm/sec.
Rhythm Formats

This control allows the user to set the default values for rhythm printing. Set the default rhythm format to 3, 6, 8 or 12-channel printing.

NOTE: The Rhythm Print Speed and Format can also be changed for a single ECG by touching anywhere on the ECG waveform in the real time view.

Configuration Settings: LAN

All parameters related to network connection must be entered under the direction of a qualified IT professional of the facility where the device is installed.

DHCP

This utility allows the IT professional to define whether the Dynamic Host Communication Protocol (DHCP) will be used to obtain an IP address.

If DHCP is YES, the network will automatically and dynamically assign an IP address.

If DHCP is NO, the IT professional must enter the IP address, def gateway, and sub net mask.

IP Address

This utility allows the IT professional to enter the fixed IP address for network transmission (if DHCP is not selected).

Def Gateway

This utility allows the IT professional to enter the address of the default gateway (if DHCP is not selected).

Sub Net Mask

This utility allows the IT professional to enter the sub net address (if DHCP is not selected).

Sync IP

This utility allows the IT professional to enter the IP address of the host server.

NOTE: Addresses are always entered as 4 sets of 3 digits; therefore, an address of 192.168.0.7 must be entered as 192.168.000.007.

Port Number

This utility allows the IT professional to enter the port number used by the host server.
Configuration Settings: WLAN

DHCP
This utility allows the IT professional to define whether the Dynamic Host Communication Protocol (DHCP) will be used to obtain an IP address.

If DHCP is YES, the network will automatically and dynamically assign an IP address.

If DHCP is NO, the IT professional must enter the IP address, def gateway, and sub net mask.

IP Address
This utility allows the IT professional to enter the fixed IP address for network transmission (if DHCP is not selected).

Def Gateway
This utility allows the IT professional to enter the address of the default gateway (if DHCP is not selected).

Sub Net Mask
This utility allows the IT professional to enter the sub net address (if DHCP is not selected).

SSID
Service Set Identifier (SSID) is the name of the wireless network. All ELI 280 electrocardiographs that will transmit to the same network must have the same SSID name. Touch the field to display the touchscreen keyboard.

PSK Passphrase
The passphrase may be from eight to 63 ASCII characters or 64 hexadecimal digits (256 bits). Touch the field to display the touchscreen keyboard.

Sync IP
This utility allows the IT professional to enter the IP address of the host server.

NOTE: Addresses are always entered as 4 sets of 3 digits; therefore, an address of 192.168.0.7 must be entered as 192.168.000.007.

Port Number
This utility allows the IT professional to enter the port number used by the host server.

Security (WEP)
Wired Equivalent Privacy (WEP) is an encrypted security protocol (part of the 802.11 standard). Access points can have multiple WEP keys stored. Each one of them is identified by a number (e.g., 0, 1, 2, 3).
**WEP Key**

This utility allows the IT professional to enter the WEP key number; valid range is 1-4.

**WEP Key ID**

This utility allows the IT professional to enter the 128-bit WEP Key ID value (26 digits in 13 sets of two digits).

**WPA-PSK**

WPA (Wi-Fi Protected Access) PSK (Pre-Shared Key) security allows for implementation of the “personal mode” of WPA. This mode of encryption employs Temporal Key Integrity Protocol (TKIP) which dynamically changes keys as the system is used.

**WPA-LEAP**

Cisco® LEAP (Light Extensible Authorization Protocol) enables use of the device with wireless networks employing the LEAP encryption protocol.

**LEAP User Name**

The LEAP user name can be up to 32 characters in length.

**LEAP Password**

The LEAP password can contain up to 32 characters.

**Configuration Settings: Date/Time**

Selecting YEAR presents a touchscreen keyboard for entry of the correct year in a four character format i.e., 2012.

Selecting MONTH presents a drop-down window for entry of the correct month.

Selecting DAY presents a drop-down window for entry of the correct day. Using the arrows at the bottom of the list will advance you to the next level of selections.

Selecting HOUR presents a drop-down window for entry of the correct hour. Using the arrows at the bottom of the list will advance you to the next level of selections.

Selecting MINUTE presents a drop-down window for entry of the correct minute. Using the arrows at the bottom of the list will advance you to the next level of selections.

Selecting TIME ZONE presents a drop-down window for entry of the correct time zone. Using the arrows at the bottom of the list will advance you to the next level of selections.

Selecting DAYLIGHT SAVINGS TIME presents a drop-down window for entry of a Yes/No selection for automatic daylight savings time to be communicated from ELI Link or an E-Scribe.
**Configuration Settings: Custom ID**

Selecting CUSTOM ID sets communication with ELI Link or an E-Scribe and downloads the Custom ID to the ELI 280.

*NOTE:* Custom ID must be configured in ELI Link or an E-Scribe.

**Configuration Settings: Network**

Selecting NETWORK establishes communication with the wireless network and displays up to five bars of signal strength. Presentation of the MAC Address, Firmware module, Radio Firmware, and IP address connected to will also be presented.

**Configuration Settings: WAM**

Selecting WAM allows the clinician to switch between WAM or AM12 patient interface cables. For pairing of the WAM with the ELI 280, please refer to the WAM user manual.

**Configuration Settings: Service**

Please refer to the Service manual for definitions and assistance with the Service functions.
## System Troubleshooting Chart

<table>

</table>
Power Off the Device

To completely shutdown the device, disconnect the AC power cord then press the ON/OFF button. Such a shutdown should always be performed prior to authorized repair of the device.

Test Operation

After cleaning and inspecting the device, proper operation of the unit may be confirmed by using an ECG simulator to acquire and print a standard 12-lead ECG of known amplitude. Printing should be dark and even across the page. There should be no evidence of print head dot failure (e.g., breaks in printing forming horizontal streaks). Paper motion should be smooth and consistent during printing. Waveforms should appear normal with proper amplitude and, without distortion or excessive noise. Paper should stop with perforations near the tear bar (indicating proper cue sensor operation).

Recommendations to Biomedical Staff

Following any service to the device or when non-compliant operation is suspected, Mortara Instrument, Inc. recommends the following procedures:

- Confirm proper operation.
- Perform testing to ensure continued electrical safety of the device (use IEC 60601-1 or ANSI/AAMI ES1 methods and limits).
  - patient leakage current
  - chassis leakage current
  - earth leakage current
  - dielectric strength (mains and patient circuits)

Battery Maintenance

The device houses an internal, sealed lead-acid battery. When installed, the battery has a shelf life of approximately six months without recharging. If the battery has been stored for a long period in a discharged state, it may not be able to regain its capacity even if it is recharged.

For information about replacing the battery, please refer to the device’s service manual.

Mortara Instrument, Inc. and Burdick recommend that the device be plugged into AC power whenever possible to maximize battery life and for the user to develop a habit of recharging the battery before the unit indicates a “low battery” condition. (That is, reduced depth of discharge.) Battery life varies by how the battery is maintained and how much it is used. For improved battery life, keep the electrocardiograph plugged in when not in use.

The sealed lead-acid battery will provide optimum life when the unit is fully charged after each use. When the battery charge is depleted to its lowest level (10.6V), the device will automatically power down. To recharge a battery from its lowest level to 85%, 4 hours of recharging may be necessary. To reach 90%, 7 hours of recharging may be necessary. It may take longer to reach 100%. The device can be used with AC power while simultaneously charging.
Cleaning the Thermal Printer

To clean the printer

1. Disconnect the power source.
2. Clean the exterior surface of the unit with a damp cloth using a solution of mild dishwashing detergent diluted in water.
3. After washing, thoroughly dry off the unit with a clean, soft cloth or paper towel.

To clean the print head

NOTE: Do not let soap or water come into contact with the writer, plugs, jacks, or vents.

1. Open writer door.
2. Lightly rub print head with an alcohol pad.
3. Wipe with a clean cloth to remove alcohol residue.
4. Allow print head to air dry.
5. Clean the platen by using adhesive tape. Apply the tape and pull it off. Rotate roller and repeat until entire roller is clean.
6. Clean cue sensor photo detector.

Cleaning the Touchscreen

To clean the touchscreen

1. Disconnect the patient
2. Clean the exterior surface of the unit with a damp cloth using a solution of mild dishwashing detergent diluted in water.
3. After wiping, thoroughly dry off the unit with a clean, nonabrasive soft cloth or paper towel.
